

We Enable & Transform Businesses through Technology.

We are an IT consulting and software development Company that help our customers reduce cost & time and improve their business' operational efficiency. Kansas Software Technologies was established in 2015. Our Head Office is located in Kansas, U.S.A with a back office in Lahore, Pakistan. We provide a wide range of services, including comprehensive placement services, professional level IT Office set up services, SEO & SMM services, web development, custom enterprise application development, graphic design and data analysis. Our development methodology combines the best practices of Agile software development methodology and the traditional waterfall software development approach.

Services

- **Custom Enterprise Application Development:** We design and develop solutions specifically for your business needs. Custom software is the best option where customers require complex processes and workflows implemented. Unlike off-the-shelf software, precise preferences and specifications are accommodated.
- **Website Design & Development:** We help customers achieve tangible business results through development of client-centric website development. Our website development team provides expert web application development and web design services to our clients, ensuring high quality in appearance, usability and accessibility.
- **Digital Marketing Services:** We provide dedicated internet marketing services to help customers increase their visibility on the internet. We employ strategies that help improve the ranking of your site, enhance the branding of your products and services and increase the user traffic.
